

SORBO 6" ADJUSTABLE ANGLE SCRAPER

Complete with Holster (Part No. 2199)

WARNING! Please read these instructions before using the Sorbo Scraper

The Scraper is equipped with a very sharp razor blade. Take extra precaution when removing or replacing the blade. To minimize rusting, wipe blade dry after every use.

The Sorbo 6" Adjustable Scraper adapts to surface irregularities so it scrapes thoroughly every time. The design prevents paint chips from getting in between the razor and the holder (which limits its effectiveness).

The channel is offset to one side to make it easier to pull the razor blade carriage out. This feature also allows the blade carriage to be extended to one side. Spares knuckles when scraping close to a wall or other obstructions. Great with Sorbo Extension Poles!

A little Sorbo Glide™ in the water makes any scraping job easier. Keeps the window well lubricated. Lift scraper off the glass on the return stroke to avoid scratches. Most scratches are made when the scraper is dragged across the surface on the return stroke.

6" double-edged razor blades (No. 2201) come in quantities of ten (10). They are made of the highest quality steel for superior sharpness and long life.
